Code porting update

Rashid Mehdiyev,

UT Austin

Aim

- To port software packages related to DAQ Monitoring tools with gcc v4_7_1

- Rebuild and UPS'ize all of those packages.

- Provide with documentation on how to do that.

Packages

- pkgconfig v0_23
- intltool v0_35_5
- reetype v2_3_5
- expat v2_0_1
- fontconfig v2_4_2
- pixman v0_10_0
- cairo v1_6_4
- libiconv v1_13_1
- glib v2_15_4
- pango v1_21_1
- rrdtool v1_3_8
- apr v1_4_2
- confuse v2_7
- ganglia v3.2.0

All that stuff sits now in
/uboone/ups
area and have a tag 4_7_1, as
for gcc v 4.7.1

Have hit a roadblock with libxml2
along the way until libxml2-devel was installed into the
System area, what actually has been done for
NOvA Far Det DAQ machine.

Documentation is on Uboone Daq Wiki now.

Need to do

To see ganglia tool on the web, we need to customize a coupld of config files and to find /usr/local/apache2/htdocs
and make some other few fixes to make it running.
